# Lessons Learned

- Providing post test telephonic support and care within 24 to 48 hours of testing enhances transfer into Care and Treatment.
- Quality of contact details collected in the field impacts on outcomes
- Minimising time on the Bridge decreases costs but at the expense of reduced successful transfers. To achieve the 2<sup>nd</sup> 90, budget must be allocated in the 1<sup>st</sup> 90.
- P.O.C. CD4 allows focused interventions, a better counselling experience and enhances the chance of conversion into treatment
